

Winch Handle

Battery juice instead of muscle power

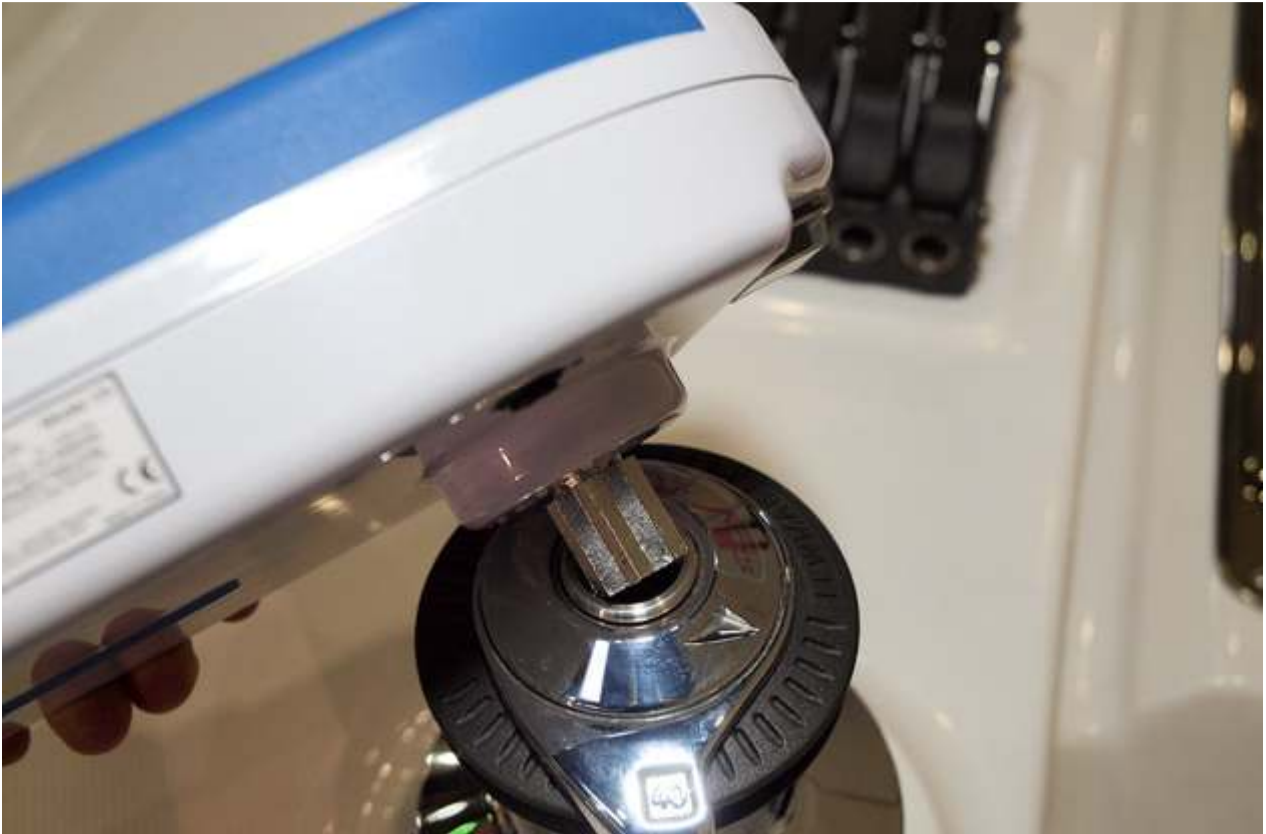

02.03.2011 Hauke Schmidt, Photos: YACHT/ H. Schmidt - Electric winches increase the ease of a yacht, but a larger investment. Cheaper is with an electric crank.

Just three kilograms is the weight of the fired with a lithium-ion battery WinchRite. Used in the recording of the crank on top of the winch, the user has to enforce a button according to the manufacturer up to 110 Nm of torque available to the halyards and sheets. In order to use both programs to the winch, WinchRite works in two directions with up to 110 revolutions per minute. Comes with chargers for 12 and 230 volts, and a bag. The British importer for Europe provides the daily rate in euro zone countries - the device will cost 599 pounds.

The drive also fits all standard winches
